System Integration and Architecture

Full Regression Test Report

Project Title: Pawfolio

Prepared By: Arong, Kyleene Jacaban

1. Project Information

Item	Details
Project Name	Pawfolio Pet Health Management System
Course	IT342 - System Integration and Architecture
Repository Link	https://github.com/kyraikkonen/IT342_Pawfolio_G4_Arong
Refactor Branch	feature/vertical-slice-refactor
Date	05/10/2026
Version	Version 1.0

2. Introduction

2.1 Purpose

This report documents the full regression testing process conducted after refactoring the Pawfolio system using Vertical Slice Architecture. The goal of the testing process was to verify that all implemented functional requirements remained operational after the restructuring of the project architecture.

2.2 Objectives

The objectives of this regression testing activity are:

- Validate all implemented system functionalities
 - Ensure system stability after refactoring
 - Detect regressions or newly introduced bugs
 - Verify maintainability improvements after applying Vertical Slice Architecture
 - Document testing evidence and results
-

3. Refactoring Summary

3.1 Refactoring Overview

The project was refactored from a traditional layer-based architecture into a Vertical Slice Architecture.

Instead of organizing files by technical responsibility such as:

- Controllers
- Services
- Components
- Pages

The system was reorganized by business features/modules.

3.2 Frontend Refactoring

Previous Structure

```
src/  
├── components/  
├── pages/  
└── services/
```

Updated Structure

```
src/  
├── features/  
│   ├── auth/  
│   ├── dashboard/  
│   ├── pets/  
│   ├── records/  
│   ├── profile/  
│   ├── notifications/  
│   ├── breeds/  
│   └── shared/  
└──
```

3.3 Backend Refactoring

Previous Structure

Controller/
Service/
Repository/
Model/

Updated Structure

features/
|— auth/
|— pets/
|— records/
|— users/

Each feature contains its own:

- Controller
- Service
- Repository
- DTOs
- Models

3.4 Refactoring Scope

Module	Included
Backend	Yes
Web Frontend	Yes
Mobile Application	No

Note

The mobile application was excluded from the current refactoring scope due to time constraints and incomplete feature parity with the web application.

4. Updated Project Structure

4.1 Frontend Structure

4.2 Backend Structure

5. Testing Environment

Item	Value
Frontend Framework	React + Vite
Backend Framework	Spring Boot
Database	Supabase PostgreSQL
Browser	Google Chrome
IDE	Visual Studio Code / IntelliJ IDEA
Operating System	Windows 11

6. Functional Requirements Coverage

FR ID	Feature	Description
FR-01	Login	Users can log into accounts
FR-02	Register	Users can register accounts
FR-03	Dashboard	Users can view dashboard statistics
FR-04	Pet Management	Users can add and manage pets
FR-05	Health Records	Users can manage health records
FR-06	Breed Explorer	Users can browse breed information
FR-07	Notifications	Users can view notifications
FR-08	Profile Management	Users can update profile details

7. Regression Test Cases

Test ID	Feature	Test Scenario	Expected Result	Actual Result	Status
RT-01	Login	Login with valid credentials	User redirected to dashboard	Successful login	PASS
RT-02	Login	Login with invalid credentials	Error displayed	Error displayed correctly	PASS
RT-03	Register	Create new account	Account created successfully	Registration successful	PASS
RT-04	Dashboard	Open dashboard	Dashboard loads correctly	Dashboard displayed	PASS
RT-05	Pets	Add new pet	Pet added successfully	Pet created	PASS
RT-06	Pets	Edit pet information	Updated information saved	Changes applied	PASS
RT-07	Records	Add health record	Record saved successfully	Record created	PASS

RT-08	Records	Edit health record	Record updated successfully	Changes applied	PASS
RT-09	Breed Explorer	Search dog breeds	Matching breeds displayed	Search working correctly	PASS
RT-10	Breed Explorer	Switch to cat breeds	Cat breeds displayed	Cat breeds loaded	PASS
RT-11	Profile	Update profile image	New image displayed	Profile updated	PASS
RT-12	Notifications	Open notifications page	Notifications displayed	Notifications visible	PASS
RT-13	Logout	Logout user session	Redirect to login page	Logout successful	PASS

8. Automated Testing Evidence

8.1 Frontend Runtime Validation

The frontend application was successfully validated using:

```
npm run dev
```

The system compiled and executed successfully without runtime errors.

8.2 Backend Runtime Validation

The backend application was successfully validated using Spring Boot runtime execution.

8.3 Build Verification

The project successfully compiled after the Vertical Slice refactoring process.

9. Issues Found During Regression Testing

Issue ID	Description	Resolution
BUG-01	Minor import path conflicts occurred during frontend refactoring	Updated import references and verified routing

No major functional regressions were encountered during final validation. Minor frontend import conflicts caused by file relocation during refactoring were resolved successfully.

10. Fixes Applied

The following fixes were implemented during regression testing:

- Updated import references and verified routing
-

11. Testing Evidence

11.1 Login Page

11.2 Dashboard & Pet Management

11.3 Health Records

11.4 Breed Explorer

11.5 Notifications

11.6 Profile Page

12. Conclusion

A full regression test was conducted after implementing the Vertical Slice Architecture refactor for the Pawfolio system.

Testing results showed that all major functionalities remained operational after restructuring both the frontend and backend architectures. Minor issues encountered during testing were resolved successfully.

The refactoring process improved:

- Maintainability
- Scalability
- Modularity
- Feature organization

The system passed the regression testing process successfully.
